SOFTWARE ENGINEER — FULL-STACK, APIs & CLOUD-NATIVE DATA SYSTEMS

SUMMARY

Software engineer with 4+ years building full-stack Django/React applications, developing APIs and data pipelines, and managing containerized infrastructure on cloud platforms (AWS, Kubernetes, Docker). Experienced unifying data from many external sources into PostgreSQL-based data stores with an emphasis on data integrity and traceability, integrating third-party services (Stripe, PayPal) into production systems, and keeping those systems reliable through production troubleshooting, CI/CD, and clear documentation. Comfortable owning features end-to-end, from design through deployment and maintenance, and using AI-assisted development tools to speed up delivery without sacrificing quality. Experienced in onboarding and training new teammates through tutorials and documentation. Drawn to practical engineering work that has a measurable, real-world impact, including software that helps organizations measure and improve the sustainability of their products. Consistently praised by supervisors and coworkers as a highly productive and efficient worker, quick learner, collaborative team member, and highly adaptive problem solver.

CORE SKILLS & COMPETENCIES

Languages & Frameworks: Python • Django • JavaScript • ReactJS • RESTful API Development

Data & Databases: PostgreSQL (SQL) • Redis (NoSQL) • RabbitMQ • High-volume data pipelines & log ingestion

Cloud & Infrastructure: AWS (incl. Amazon EKS) • Docker • Kubernetes • Terraform • Git • GitHub Actions • CI/CD

Reliability & Security: Production troubleshooting • Centralized logging (CloudTrail, CloudWatch, Splunk, Elasticsearch/Kibana, Loki) • Metrics monitoring (Prometheus, Grafana) • Static code, dependency, container, and host security scanning

Practices: AI-Assisted Development • Stripe & PayPal API Integration • Technical Documentation • Code Review • Agile Methodology

PROFESSIONAL EXPERIENCE

Software Developer / DevOps Engineer **2026**

LunarTech, LLC *Remote*

- Designed and built a payment-processing API from scratch for LunarTech's Octavia (AI video translation/dubbing) and Babel (AI document translation) platforms, integrating Stripe and PayPal to support customer billing and subscriptions.
- Implemented code changes that decreased processing time for Octavia's video translation workflow, contributing to a broader optimization effort that enabled fast, reliable translation of videos up to 10 hours long — a capability that helped differentiate the product from competitors.
- Leveraged AI-assisted development tools such as OpenAI Codex throughout the development lifecycle to speed up implementation and code review while maintaining code quality.
- Collaborated remotely with an international team across multiple time zones, coordinating through clear written communication and documentation.
- Performed application security reviews across static code analysis, package/dependency scanning, container scanning, and host scanning to identify and resolve vulnerabilities.

Software Developer / DevOps Engineer **2019 – 2024**

iSystematics, LLC *Columbia, MD (Remote)*

- Developed and maintained a full-stack Django and React application and its supporting APIs, collecting and processing 1–5 gigabytes of customer data daily from a variety of external sources and integrations, including Nessus, AWS Security Hub, CloudSploit, and SonarQube.
- Managed the application's containerized infrastructure with Docker and Kubernetes, migrating from a traditional server-based deployment to a highly available Amazon EKS environment with 99%+ uptime, connecting PostgreSQL, NGINX, Redis, RabbitMQ, SaltStack, and HashiCorp Vault.
- Set up log monitoring (Elasticsearch/Kibana, Loki/Grafana) and metrics monitoring (Prometheus/Grafana) in Kubernetes.
- Led knowledge transfer for a development team at a partner company that purchased the application, getting them up to speed on how it was built, deployed, and supported.
- Authored documentation and training guides in Atlassian Confluence for teammates and customers, and delivered tutorials to teammates.
- Diagnosed and resolved a recurring application issue causing weekly out-of-memory errors and downtime by transitioning the message broker from Redis to RabbitMQ, improving overall system reliability.
- Tested the application extensively, identifying bugs and giving developers actionable feedback to improve quality.
- Implemented CI/CD pipelines in GitHub Actions to seamlessly deploy new code and application upgrades with less than one minute of downtime.
- Devised a centralized logging integration in Terraform that collected up to 10 gigabytes of CloudTrail and CloudWatch Logs data daily for ingestion into Splunk, supporting data-driven monitoring and troubleshooting.
- Performed continuous static code security analysis on client applications written in C# and JavaScript that serviced federal and state healthcare contracts, providing feedback within 24 hours of each pull request.

EDUCATION

Bachelor of Arts, Computer Science — McDaniel College • Cum Laude Westminster, MD

Associate of Applied Science, Cybersecurity — Carroll Community College • Summa Cum Laude Westminster, MD
